DEC. 27. 2005 3:57PM 16509618301 . NO. 703 P.

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing Of Claims

1. (Currently Amended) A method of using a number of a plurality of cryptographic keys key in a display device, comprising:

in a display device having a printed circuit board (PCB) and a master block, comprising:

providing a key providing the number of the plurality of keys to the PCB by the master block;

selecting one of a number of eneryption protocols available to the PCB;
selecting one of a number of available encryption protocols for each of the

provided keys;

encrypting the key based upon the selected encryption protocols;

encrypting each of the provided keys based upon a particular one of the selected encryption protocols;

storing the encrypted keys key in a non-volatile memory by the PCB;

decrypting the stored encrypted key, as needed, by the PCB based upon the selected encryption protocol.

- 2. (Cancelled)
- 3. (Cancelled)
- 4. (Currently Amended) The method as recited in <u>claim 1 elaim 3</u>, further comprising:

storing the encrypted keys in the non-volatile memory.

5. (Original) The method as recited in claim 4, further comprising:

decrypting selected ones of the stored encrypted keys, as needed.

- 6. (Currently Amended) The method as recited in <u>claim 1</u> elaim 2, wherein the \plurality of keys includes a decryption key and an authentication key.
 - 7. (Original) The method as recited in claim 6, further comprising: receiving a cryptography related command.
- 8. (Original) The method as recited in claim 7 wherein the cryptograhy command includes an authentication request and a number of associated authentication request parameters.
- (Original) The method as recited in claim 8, wherein the authentication request is an HDCP authentication request.
- 10. (Original) The method as recited in claim 8, further comprising:
 retrieving an encrypted authentication key from the non volatile memory
 corresponding to the authentication request; and

decrypting the authentication request based upon a corresponding decryption protocol.

- 11. (Original) The method as recited in claim 10, further comprising:
 responding to the authentication request based on the decrypted authentication request.
- 12. (Currently Amended) Computer program product for using a cryptographic key in a display device, comprising:

in a display device having a printed circuit board (PCB) and a master block, comprising: computer code for providing a key to the PCB by the master block;

computer code for selecting one of a number of encryption protocols available to the PCB;

computer code for encrypting the key based upon the selected encryption protocols;

computer code for storing the encrypted key in a non-volatile memory by the PCB;

computer code for decrypting the stored encrypted key, as needed, by the PCB based

computer readable medium for storing the computer code.

upon the selected encryption protocol; and

13. (Original) Computer program product as recited in claim 12, wherein the key is one of a plurality of keys and further comprising:

computer code for providing a number of the plurality of keys.

14. (Original) Computer program product as recited in claim 13, further comprising: computer code for selecting one of the number of available encryption protocols for each of the provided keys; and

computer code for encrypting each of the provided keys based upon a particular one of the selected encryption protocols.

- 15. (Original) Computer program product as recited in claim 14, further comprising: computer code for storing the encrypted keys in the non-volatile memory.
- 16. (Original) Computer program product as recited in claim 15, further comprising: computer code for decrypting selected ones of the stored encrypted keys, as needed.
- 17. (Original) Computer program product as recited in claim 13, wherein the plurality of keys includes a decryption key and an authentication key.
 - 18. (Original) Computer program product as recited in claim 17, further comprising:

computer code for receiving a cryptography related command.

- 19. (Original) Computer program product as recited in claim 18 wherein the cryptograhy command includes an authentication request and a number of associated authentication request parameters.
- (Original) Computer program product as recited in claim 19, wherein the
 authentication request is an HDCP authentication request.
- 21. (Original) Computer program product as recited in claim 19, further comprising: computer code for retrieving an encrypted authentication key from the non volatile memory corresponding to the authentication request; and

computer code for decrypting the authentication request based upon a corresponding decryption protocol.

22. (Original) Computer program product as recited in claim 21, further comprising: computer code for responding to the authentication request based on the decrypted authentication request.
